## ELECTROCAUTERY PROBE AND DISPOSABLE TIPS

The ReNew Electrocautery Probe is a reusable, monopolar instrument that works with high-quality, disposable tips to put greater control in the hands of the surgeon. The four ReNew Electrocautery Tips are easily attached to the insulated shaft using an insulated threaded design to promote optimal safety for the surgeon during electrosurgical use. This design provides the surgeon full control during any procedure because the electrosurgical effect is achieved only where metal is exposed.

- Repposable system features two reusable handpiece lengths and four disposable tips
- Superior electrode insulation for safety, even at higher voltages
- Tips can be changed during procedures without voltage implications
- Ergonomically designed handpiece for balance and comfort
